

New facility allows for vertical integration at Starview

We are pleased to announce that we have added two new CNC Vertical Machining Centers to our manufacturing facility. These will allow us better control over our schedules and costs for tooling and machine components. The machines were up and producing parts several days after they arrived. We are excited about this expansion and look forward to other additions in the coming months.

Summer Vacation schedule announced

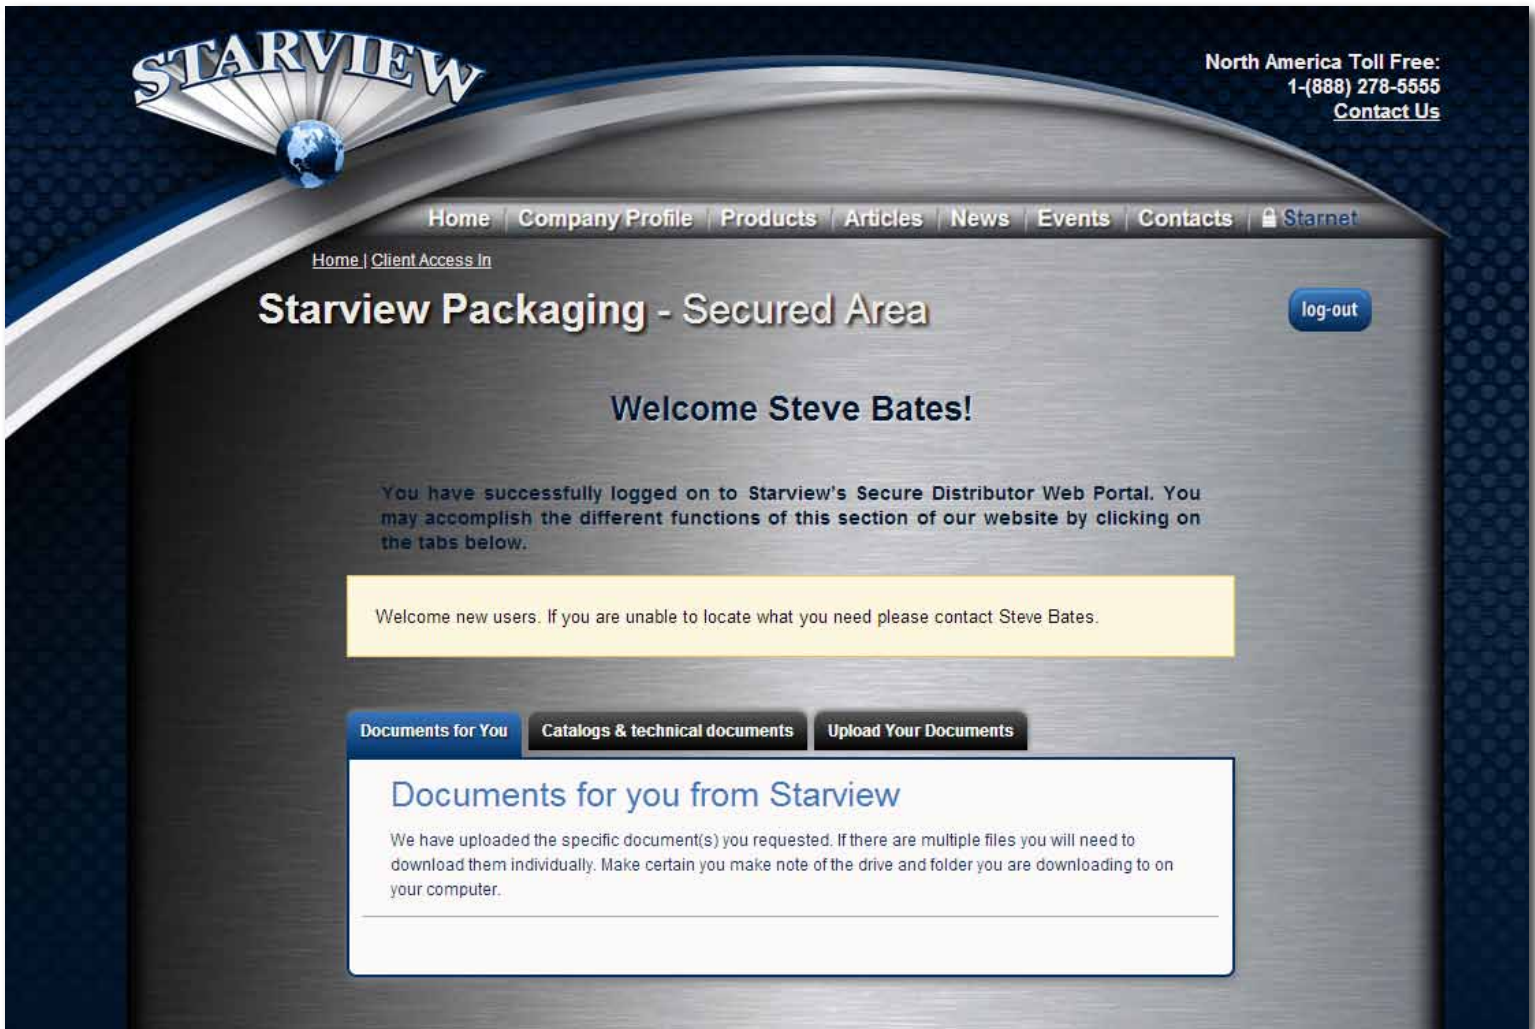

Starview will have a reduced workforce from **July 21, 2014 through August 1, 2014**. We will resume normal production beginning Monday, August 4, 2014. The majority of our Canadian suppliers will be closed during this same period.

We will have a minimal staff on hand to respond to inquiries and make emergency repair part shipments of in-stock items.

We wish everyone a safe and fun summer vacation season.

Update on the Distributor Portal for Starview's website

SWe are almost there. Thanks to the Beta Testers we have shaken most of the bugs out of the program and are now in the process of moving all of the coding and files to the Starview site.

We are even giving this new area of our website a name. It will be called **STARNET**. We will be sending a separate announcement once the coding is finished and the files are uploaded.

In the meantime please continue to contact us for the latest quotations on any of our machines. We look forward to working with you on any existing or new projects you may have.
