

Visit Starview at Pack Expo International 2018 North Hall Booth #N-5730.

C O - L O C A T E D

October 14–17, 2018 • McCormick Place
Chicago, Illinois USA

As the show opening rapidly approaches we are excited about the largest booth we have ever undertaken for Pack Expo; nearly two-thousand square feet. It is not just about the size of the booth but the variety of machines we are able to demonstrate in one venue. We are going to have blister packaging machines ranging from simple shuttle machines through a full featured sixteen-station carousel machine. Our latest skin packaging machine will be operating. We will be producing retail carded packages, medical device packages, cold seal packages and secure pharmaceutical packages.

Don't miss this unique opportunity to see our machines in operation and to discuss any current or future opportunities with our sales professionals. You may take actual samples to show your customers the types of packages that can be produced on Starview's machines.

We don't just make machines - we unlock packaging possibilities.

New at Starview

Starview completed a sixteen-station carousel Machine with advanced automation and integrated package inspection.

Starview recently designed and manufactured a BSC16-1418 Carousel Blister Sealing machine that goes way beyond just blister sealing. This machine integrates multiple feeder stations with a combination of vision and bar code verification systems. The verification process includes rejection of out-of-specification packages at the machine's automatic unloading station. Correct packages continue in the customer's production stream with the rejected packages segregated in a reject bin for disposal. With the high-speed operation of this machine it is more cost effective to discard rejected packages than to stop the machine, diagnose and repair a faulty package every time one is encountered.

If you are coming to Pack Expo International 2018 you can see this machine in operation. We would be pleased to describe in detail any of the custom features that make this machine unique. This will help you better understand Starview's ability to design and manufacture integrated systems to help your clients become more efficient. Even if you are not coming to PackExpo please feel free to contact one of our sales professionals to discuss how Starview can provide an efficient packaging system to improve your customer's productivity.
